

Comprehensive Solutions for Order and Execution Management

HTX Pro targets traders who need fast, stable, cost-effective, and easy-to-use global electronic order entry. Fully-integrated Execution Management and Order Management capabilities are hallmarks of the system, and the ability to handle complex trading strategies on a global basis truly sets the platform apart from its peers.

HTX Pro Execution Management

Algorithmic Orders and Advanced Order Types:

Enjoy ease of execution for Weighted Time Slice orders or Time Slice orders. Additional tools include VWAP Tracker (which monitors WTS orders and measures their performance against the actual VWAP for the stock) and HTX Pro Chart, which reads the WTS order and displays a tick chart for the stock with real-time VWAP. Advanced order types include scaled orders, reserve orders, scaled reserve orders and floating orders. Algorithmic orders and advanced order types are accessible from the main order ticket, or from integrated screens while using other tools within the platform such as HTX Pro List or Global Pairs trading.

Multi-currency Pairs Trading:

Management capabilities are hallmarks of the system, and the ability to handle complex trading strategies on a global basis truly sets the platform apart from its peers.

HTX Pro Basket Trading:

Empowering traders to execute trading strategies across the global marketplace for index arbitrage, ETF arbitrage, sector trading, or other special situations or synthetic instruments; HTX Pro Basket tools include real-time slippage and transaction cost analysis, theoretical price calculation for the basket, and ease of revision, cancellation, or reversal of an order. Basket trading can also be linked to the Pairs trading module—so you can trade a single stock against a basket.

HTX Pro List Trading:

Managing large lists of orders, listing a trade over multiple days, or listing across global markets is made easier by HTX Pro List trading. Functionality includes the ability to create and enter orders for an entire list or a subset of a list. Traders can easily enter the size of the order, max share quantity, value, price, and optionally specify an advanced or algorithmic order type. Enjoy monitoring and analytics tools such as percent complete, traded value, and calculation of unexecuted slippage—or the difference between the benchmark price and current market price.

HTX Pro Order Management

Centralized Order Blotter:

Providing a centralized, OATS-compliant order blotter that can be shared with multiple traders; All or part of an order can be directed to an exchange, sent to a built-in algorithmic engine, or to any of the advanced applications like Global Pairs trading, List trading, or to another desk or broker using a FIX-compliant system. Pre and post-trade allocations may be implemented with ease, and will flow seamlessly through to the clearing interface. A series of multiuser and multi-tiered permissioning capabilities are also available to provide shared visibility among peers. The blotter will seamlessly track the status of all orders including average prices, leaves quantity, and much more. HTX Pro Order Management functionality is seamlessly integrated with the HTX Pro Execution Management software.

About Us

HTX is a product of Sutton Consulting Group, Inc. Established in 1997 by trading technology engineers, Sutton Consulting Group specializes in advanced trading products, and has worked directly since its inception with traders to create, develop, and improve sophisticated trading tools. In fact, the Sutton Consulting Group team members were the designers of the first commercial electronic direct access Order Management System in 1990. Their expertise has only increased with years of experience in quality product development for traders and trading firms.

The company built its reputation by developing, and customizing, high quality advanced trading tools, most notably pairs – creating the best application in the industry for pairs trading. Originally known as Happy Trader, Sutton Consulting Group has a twelve-year proven track record of providing high quality advanced trading tools with unparalleled support and reliability – thus enabling HTX to be at the forefront of trading needs.
