

Targeting traders needing fast, stable, easy, and cost-effective global electronic order entry, HTX Pro provides a comprehensive list of features expected in a robust direct-market-access product: point and click trading, Level II displays, Tick Charts, Time and Sales, and much more. What really sets HTX Pro apart, is a broad set of additional features geared toward the global marketplace, including built-in Algorithmic Orders, Order Management functions such as a trading blotter, pre and post-trade allocations, and a multi-user, multi-tiered permissioning system. Tight integration with advanced applications such as List Management, Basket Trading, and Pairs Trading are key strengths of the platform.

### Fast, Intuitive Order Entry

The order ticket provides rapid access to a wide array of simple and advanced global order types through an intuitive display requiring minimal training for even the most 'technically challenged' traders. Market data is displayed and updated in real time enabling point-and-click entry of prices. Size warnings and limitations, along with market data checks, minimize the possibility of error. Pre-trade allocations can be performed simply by choosing from a list of available accounts.

### Level II and the Toronto Order Book Point-and-Click Order Entry

HTX Pro provides dynamic displays of depth of book for Level II and the TSE Exchange. Clicking on a price point within the montage will 'sweep' the book to the price point chosen. Users' orders are shown in the book under their name and can be revised or cancelled directly from the display. Multiple books can be displayed concurrently in separate windows.

### Time and Sales, Tick Charts, and VWAP Tick Charts

Time and sales windows provide a time-stamped, tabular display of each execution. Tick charts provide the user with a graphical depiction of each trade, along with a histogram indicating volume for each trade. In addition, VWAP for the time frame of a Weighted Time Slice (best efforts VWAP) order can be overlaid on top of the standard tick chart to provide valuable information on the order. Anomalies in volume distribution can be easily identified.

## ALGORITHMIC AND OTHER ADVANCED ORDER TYPES

HTX Pro offers built in Algorithmic Order types along with an array of other Advanced Order types. Weighted Time Slice (best efforts VWAP), Time Slice, Reserve, Scaled, Time Replace and several more advanced order types provide the trader with an extensive arsenal of trading tools for the most challenging orders.

Symbol	Type	Time	Order Qty	Limit	Status	Leaves Qty
MSFT	BUY	WTS	25,000	00	WORKING	25,000
MSFT	BUY	Market	100	00	WORKING	100

AMD	SELL	ECN Best	3,000	33.98	WORKING	3,000
MSFT	BUY	Market	100	00	WORKING	100
CSCO	SELL	Weighted	3,000	28.98	WORKING	3,000
CSCO	SELL	Limit	1,000	28.98	WORKING	1,000
MSFT	BUY	Market	100	00	WORKING	100
NOVA	BUY	FL With	3,000	6.84	WORKING	3,000
MSFT	BUY	Market	100	00	WORKING	100
RTU	SELL	Time Slice	7,000	00	WORKING	7,000

## FULL ORDER MANAGEMENT SYSTEM INTEGRATION

HTX Pro is fully integrated with HTX Pro Order Management. In addition to outstanding execution management, HTX Pro offers extensive Order Management features including an OATS-compliant trading blotter, pre- and post-trade allocations, the ability to receive customer orders through FIX, multi-user, multi-tiered permissioning, and many other features

## REAL TIME MARKET DATA MONITORING

Users can create unlimited Watchlists, which display market data for any number of symbols in a grid. The Watchlist provides efficient point-and-click trading capabilities.

Symbol	Last	Chg %	NetC	Bid	Ask	Bid	Ask

## CUSTOM INTERFACE CONFIGURATION

The HTX Pro interface can be customized to fit each trader's unique requirements. Users have complete control over the number and position of windows, what information is displayed in those windows, and how it is formatted. HTX provides easy to use point and click and drag and drop features to do everything from position windows, change data displays, sort, and filter information. Flexible audio and color alerts notify the trader when thresholds are reached.
