

The HTX Pro Global Multi-currency Pairs Trading application provides tools to automate a variety of pairs-related execution strategies. The software handles the implementation details of the executions that traditionally require time-consuming management by traders. Traders enter the relationship between instruments, set a variety of parameters like total quantity, leg size, and contingency strategy and the software will tirelessly work the spread at the specified levels. Traders can execute global pairs at tighter spreads with much higher hit rates than alternative methods, all at known risk parameters. Summary data provides information on executed spread levels, remaining quantity, the current market spread and much more. Unlike alternative solutions the HTX Pro Global Multi-currency Pairs Trading software was built from the ground up as a pairs-trading solution. Refined over several years by direct input from traders, the HTX Pro Global Multi-currency Pairs Trading software stands above the competition.
